REC\_DS using C\_Week 2\_COD\_Question 1

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

## 1. Problem Statement

Your task is to create a program to manage a playlist of items. Each item is represented as a character, and you need to implement the following operations on the playlist.

Here are the main functionalities of the program:

Insert Item: The program should allow users to add items to the front and end of the playlist. Items are represented as characters. Display Playlist: The program should display the playlist containing the items that were added.

To implement this program, a doubly linked list data structure should be used, where each node contains an item character.

**Input Format** 

The input consists of a sequence of space-separated characters, representing the items to be inserted into the doubly linked list.

The input is terminated by entering - (hyphen).

#### **Output Format**

The first line of output prints "Forward Playlist: " followed by the linked list after inserting the items at the end.

The second line prints "Backward Playlist: " followed by the linked list after inserting the items at the front.

Refer to the sample output for formatting specifications.

### Sample Test Case

```
Input: a b c -
Output: Forward Playlist: a b c
Backward Playlist: c b a
Answer
#include <stdio.h>
#include <stdlib.h>
struct Node {
char item;
  struct Node* next;
  struct Node* prev;
}:
// You are using GCC
void insertAtEnd(struct Node** head, char item) {
 //type your code here
 struct Node* newNode=(struct Node*)malloc(sizeof(struct Node));
 newNode->item =item;
 newNode->next = NULL;
 if(*head == NULL){
   newNode->prev =NUL
   *head =newNode;
```

```
return;
                                                                            240101469
                                                   240701469
      struct Node* temp =*head;
      while(temp->next != NULL){
        temp =temp->next;
      temp->next= newNode;
      newNode->prev = temp;
    void displayForward(struct Node* head) {
      //type your code here
      struct Node* temp =head;
        printf("%c ",temp->item);
temp=temp>
      while(temp != NULL){
        temp=temp->next;
      printf("\n");
    void displayBackward(struct Node* tail) {
      //type your code here
      struct Node*temp=tail;
      while(temp!=NULL){
        printf("%c ",temp->item);
        temp= temp->prev;
                                                   240701469
printf("\n");
    void freePlaylist(struct Node* head) {
      //type your code here
      struct Node*temp;
      while(head != NULL){
        temp =head;
        head =head->next;
        free(temp);
      }
    }
                                                                             240707469
    int main() {
     struct Node* playlist = NULL;
      char item;
```

```
while (1) {
scanf/"
                                                                                        240707469
                                                          240701469
          scanf(" %c", &item);
if (item == '-') {
             break;
          insertAtEnd(&playlist, item);
        struct Node* tail = playlist;
        while (tail->next != NULL) {
          tail = tail->next;
                                                                                        240101469
printf("Forward Playlist: ");
displayForward(playlist: ");
        }
        printf("Backward Playlist: ");
        displayBackward(tail);
        freePlaylist(playlist);
        return 0;
     }
     Status: Correct
                                                                                Marks: 10/10
                                                                                        240701469
